- The engine body and other main structures have been long tested to ensure the high reliability of the whole machine.
- Integrated cylinder head and water outlet main pipe design, reduce sealing cover and improve sealing reliability.
- Environment: The engine can work normally under the following conditions without de-rating:
- A. 1800r/min engine--altitude less than 1500m (5000ft), ambient temperature less than 40  $\,^\circ C$  (104  $^\circ\,$  F).

B. 1500r/min engine--altitude less than 1310m (4300ft), ambient temperature less than 40 °C(104° F) But engine working environment conditions exceed above,

the engine output power will de-rate 4% as altitude increase each 300m(1000ft) at the altitude is higher than 1500m (5000ft),

Also it will de-rate 2% as temperature increase every 11  $\degree$ C(1% de-rating ,when temperature increase each 10° F). in the ambient temperature is higher than 40°C(104° F)
